PROJECT REPORT ON DIGITAL LITERACY

Name: Shriya Parmar
Registration No.: 25BAI10307
Course Code: CSE0001
Course Title: Digital Literacy
University: VIT Bhopal
Date: 26/03/2026

Introduction

As a Student Digital Ambassador at VIT Bhopal, this project helped me understand the importance of digital literacy in today's world. Digital literacy is not just about using technology but also about communicating professionally, maintaining an online presence, and staying safe online. Through this project, I explored different platforms like LinkedIn, GitHub, and coding websites, and also learned how to create professional emails and awareness resources.

Each task in this project focused on a different aspect of digital skills, including designing an infographic, building a portfolio, practicing coding, understanding email etiquette, and learning about cybercrime. This project enhanced my practical knowledge and made me more confident in using digital tools responsibly and effectively.

Task-1 Infographic Write-up

For this task, I created a digital literacy awareness infographic using Canva. The design focused on explaining what digital literacy is, safe internet practices, and the importance of maintaining a professional online presence. I chose Canva because it is easy to use and provides a variety of templates, icons, and design elements that help in creating visually appealing content.

My infographic included sections on online safety tips, useful digital tools for students, and guidelines for professional communication. I used icons, color combinations, and minimal text to make the design clear and engaging.

One interesting part of this task was learning how to present information in a concise and visual format instead of writing long paragraphs. Initially, it was a bit difficult to decide what content to include and how to arrange it effectively, but Canva made the process easier. Overall, this task improved my design skills and helped me understand how to communicate information visually.

Task 2 – Digital Portfolio Write-up

In this task, I created and updated my profiles on platforms like LinkedIn, GitHub, and Kaggle. Each of these platforms serves a different purpose in building a professional digital presence. LinkedIn is useful for networking and showcasing academic and professional achievements, GitHub is used for sharing coding projects and repositories, and Kaggle helps in practicing data science and analytics skills.

On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my education details, including my degree and university. These platforms help in building credibility and are often checked by recruiters and internship coordinators.

In the next four years, I plan to actively use these platforms by uploading projects, participating in competitions, and connecting with professionals. This task made me realize the importance of maintaining

a strong and professional online identity from the beginning of my academic journey.

Task 3 – Platforms Write-up

For this task, I explored both coding practice platforms and collaboration tools. I created an account on HackerRank and completed a beginner-level coding challenge. This helped me understand basic problem-solving and improve my coding skills.

Additionally, I created a Google Form as a Digital Literacy Awareness Quiz for my classmates. The form included five questions, including multiple-choice and short-answer types. I also viewed the responses in Google Sheets, which helped me understand how data can be collected and analyzed.

This task was very useful because it combined both technical and practical skills. Coding platforms help in improving logic and programming abilities, while tools like Google Forms are helpful for surveys, quizzes, and data collection in academic projects. Overall, this task enhanced my confidence in using online platformsfor learning and collaboration.

Task 4 – Write-up

This task focused on professional communication and email etiquette. I learned how to write formal emails with proper structure, including subject lines, greetings, body content, and sign-offs. Writing emails in a professional tone is important when communicating with professors or applying for internships.

I also created a social media checklist that highlights responsible online behavior. One situation where poor communication can cause problems is when a student sends an informal or unclear email to a recruiter. This can create a negative impression and lead to missed opportunities.

This task helped me understand that digital communication reflects a person's professionalism. Using proper language, tone, and format is essential in both academic and professional environments.

Task 5 – Write-up

While researching cybercrime, what surprised me most was how easily people can become victims of online scams, especially UPI fraud. Many attacks do not involve complex hacking but instead rely on tricking users into making mistakes, such as approving fake payment requests.

I realized that even students can be targeted because they frequently use digital payment apps. This made me more aware of the importance of verifying every transaction and being cautious online.

As a result of this task, one habit I will change is that I will never approve any unknown payment request without verifying the source. This awareness will help me stay safe and also guide others in avoiding cyber fraud.

Conclusion

This project helped me develop essential digital skills, including designing, communication, online presence, and cybersecurity awareness. I learned how to use various platforms effectively and understood the importance of being responsible in the digital world. Each task contributed to improving my practical knowledge and confidence. Overall, this project was a valuable learning experience that will help me in both my academic journey and future career.
